WATERPROOF GEAR
MOTOR**

**ROBUST DESIGN OF THE
HOUSING AND THE
MOUNTING**

STEEL LOCKING BOLTS

Ø 25 mm

FOUR STEEL SIDE BOLTS

Ø 25 mm

STEEL
REINFORCING
PLATE

PROTECTS AGAINST
UNAUTHORIZED ACCESS
THROUGH THE LEFT SIDE
OF THE TRAILER

3 mm

EXAMPLE OF THE **T-LOCK** INSTALLATION

A reliable security system including a strong, waterproof lock motor that meets IP69K criteria and is tested in a wide range of temperatures ensures that the goods arrive safely. The intuitive ATRAX4 platform allows authorized personnel in your company to remotely lock and unlock the semitrailer doors and generate a unique code for the driver, if required. The telematics system also allows you to view the semitrailer's location at all times and generate route and event reports.

Top and bottom steel locking bolts are mounted in a rugged housing made of high quality stainless steel. In addition to this, side bolts are installed on each of the leafs to protect the doors from being unhinged. Unauthorized persons cannot enter the semitrailer.
